

## HOW TO CLEAN FLOORS WITH SIMIX

**FIRST, SWEEP THE STORE AND SCRAPE OFF LABELS AND GUM.**

### **HOW TO CLEAN NIGHTLY WITH AUTOSCRUBBER OR MOP**

#### **Autoscrubber:**

1. Use regular red pads for daily cleaning.
2. Put the water at maximum with high pressure on pads, and autoscrub at medium speed.
3. In dirty, high-traffic areas like front cart section, scrub with gate up on first pass, allowing water to dwell for a couple minutes. Come back a few minutes later to scrub and pick up with gate down.
4. After completing half the store, flip the red pads and finish the store.
5. Drain and rinse solution tank at the end of the night.

#### **Detail mop the hard to scrub areas and edges:**

1. Use hot water in your mop bucket.
2. Mop the floors where the autoscrubber can't get to.
3. Do not let water puddle. Make sure you wring out mop often.
4. Wipe up the sides and any residual water.
5. When water turns dark, pour out water and refill. You cannot clean the whole store with one bucket.

## **HOW TO SCRUB AND BUFF**

First, dust mop and spot clean as you always do. Next, scrub with autoscrubber as you always do.

Then, it's time to buff. You won't buff the whole store in one night. Follow the buffing schedule to figure out which area to do.

1. Use 800 diamond grit pads on burnisher. Always put pads color side down.
2. Go over each section of the floor at least twice, up and back. Walk at medium speed. It's not a race.
3. After buffing is complete, rinse pad with warm water and hang to dry.
